ALUVII 1.7

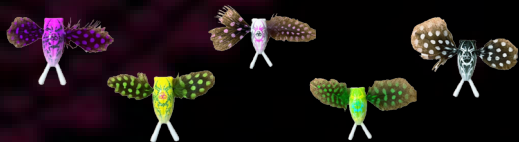

Expressing the naturalness and temptation that lures should have through color and design.

We would also like to breathe new life into insect-type worms with the "Alvy 1.7," which has a unique body balance and functionality.

It tempts bass by floating lightly on the surface of the water. Also, if you use it in conjunction with the method of sinking floating material, it will bring even more fishing results.

This worm can be used by a wide range of people, from advanced users to beginners.
