COLOR LINE UP

FEATURES

When it falls, it produces a bait that flutters and weakens and sinks. It appeals to a wide range while sliding from side to side with light rod work.

Symmetrical design similar to R Sardine and F Sardine.

By using a low specific gravity material, zinc alloy (specific gravity: 8.6), the fall speed is reduced,

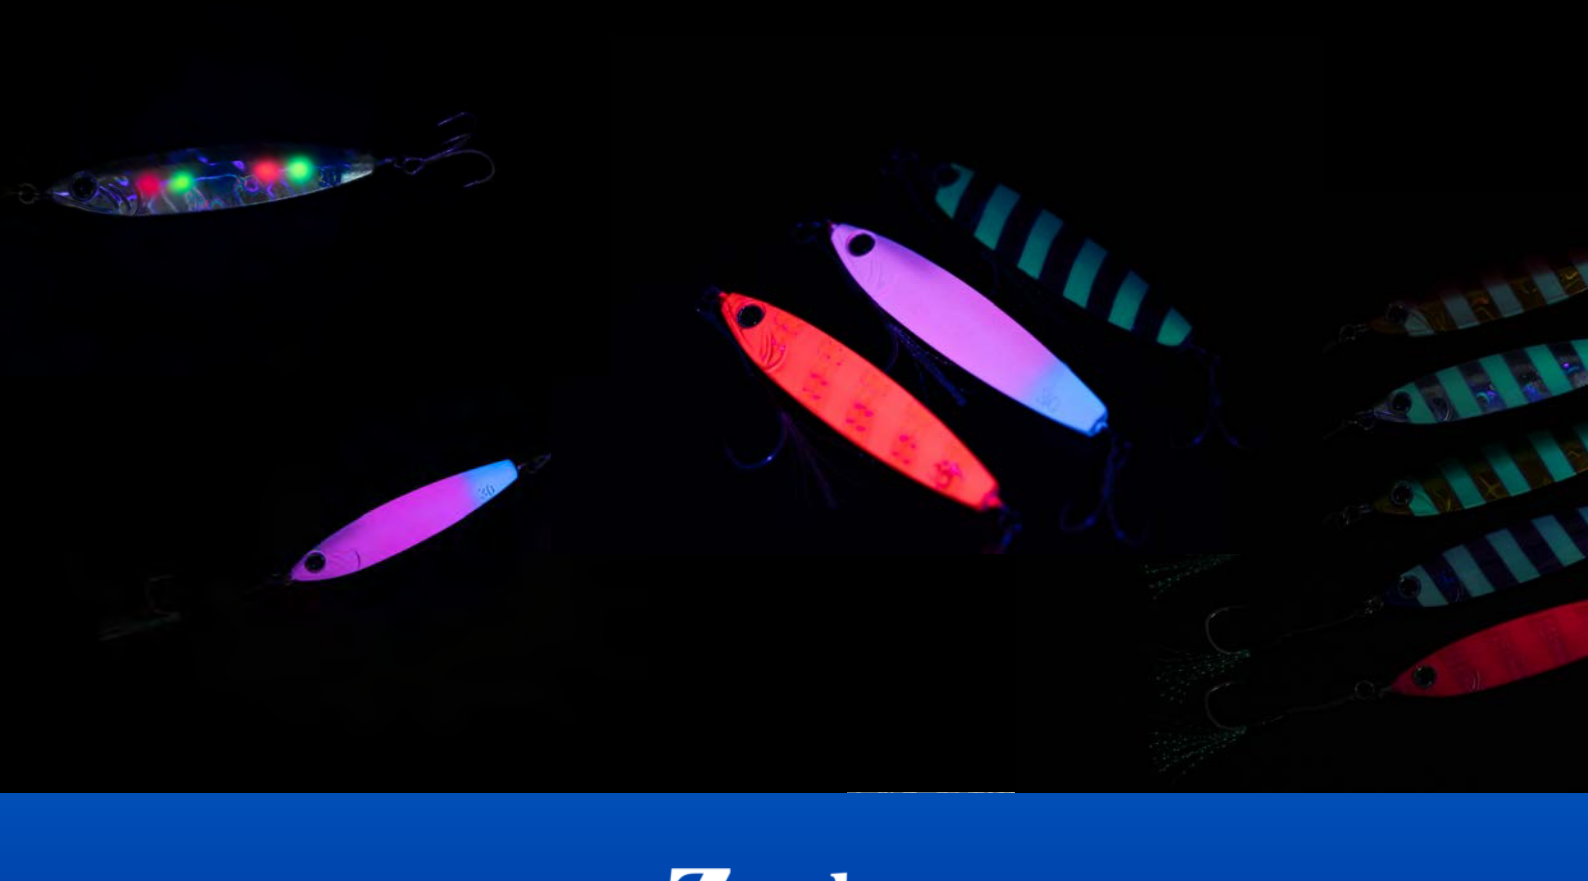

It appeals with a glaring side fall at a shorter distance.

With a thin center-rear center of gravity design that eliminates air resistance, you can gain solid flight distance and attack a wide range. We have prepared 10 popular colors with an emphasis on appealing colors.

Turn on the predation switch for blue fish, flat fish, cutlass fish, rock fish and fish eaters! This is a zinc alloy metal jig.

When irradiated with UV light
